Los Angeles, CA 90034 | (240) 595-9273 | addyhebou@gmail.com | linkedin.com/in/addyhebou

EDUCATION

New York University, Tandon School of Engineering – Bachelor of Science, Computer Science

May 2022

SKILLS

Languages: Typescript | Javascript | CSS/SASS | Python | ReactJS | NextJS | Node | Git | SQL | Jest & React Testing Library

WORK EXPERIENCE

Snapchat, Snap Inc.

August 2022 – February 2025

Software Engineer

- [Snapchat for Web](#):
 - Built responsive emoji picker for Snapchat Web chat, improving user interaction across browsers.
 - Created UI flows for browser-level camera and mic permission requests (Safari & Chrome).
 - Contributed to My AI (Snapchat + OpenAI), authored shared UI component docs for visual consistency across teams, and enabled LaTeX/markdown support.
- [Ads Monetization](#):
 - Worked on *Instant Create*, a tool for small businesses to rapidly launch ads using smart templates, helping improve ad creation time and usability, including quick budget/duration settings and preview tools.
- *Performance Review Internal Applications*:
 - Developed features like **outlier detection** in employee performance cycles and designed **bucket categorization** UI for performance review allocations.
 - Fully rebuilt and optimized the **rich text editor**, replacing deprecated third-party dependencies and enabling stable custom formatting, reducing internal support tickets.
- *Falcon*:
 - Led front-end work on internal performance analytics tools used by Snap engineers to monitor regressions and A/B test metrics across commits. Implemented GitHub integration to dynamically pull commit data and track metric impacts like camera load time, app startup, etc.

Villa

March 2024 – Current

Founder / Full-Stack Product Engineer

- Led product design and development of Villa, a 4-in-1 tool that streamlines the creative and administrative process for music professionals.
- Designed and launched a legally-compliant split sheet agreement creator with email-based signature tracking and status updates.
- Built full stack app (Next.js + Firebase for auth and database handling); led Figma prototyping and early user testing.

Sandia National Laboratories of Department of Energy

June 2021 – August 2022

Front End Engineer

- Built 200+ internal web pages in Vue.js; improved accessibility from 35% to 95%; shipped reusable UI components across org.

PROJECTS

[Beat Shop \(Web Application\)](#)

February 2022 – Present

- Built a full-stack web app where users commission custom-produced songs by selecting references, moods, deadlines, and uploading audio.
